

Considering Switching to a Heat Pump Water Heater? You Could Get up to a \$500 Rebate and Save on Your Monthly Electricity Bills!

Is your water heater more than 10 years old? With rebates up to \$500 from the HELPS Program, consider replacing your old water heater now, before it fails, with a modern heat pump water heater. In the process, you can save some green while helping to lower your carbon footprint.

For West Boylston Municipal Light Plant customers, heat pump water heaters:

- produce nearly 4x less CO₂ emissions than standard electric water heaters
- are eligible for a HELPS Rebate
- are nearly 4x less expensive to operate annually

Heat Pump Water Heater (50 gallon tank)

Standard Electric Water Heater (50 gallon tank)
